## Promises.

- ✓ C. W. Arndt, Service Techniques, Port au Prince, Haiti next year will prepare exhibits to show method in preparation of coffee, etc. Will furnish Nat. Mus. a set if wanted. write him.
- ✓ Send Arndt name of slug.
- ✓ Photos to Boog Scott.
- ✓ Birds of Porto Rico to Freeman.
- ✓ Fish and Shrimp, Riviere at Fond des Neiges, Haiti coll. March, 1927, Dr. Vinson. Send him one named specimen of each.
- ✓ Have told Freeman that we will be glad to name any objects of Natural History for him.
- ✓ Lieut. J. J. Brown, Belladere, Haiti wishes to sell coin. Send him name of possible purchaser.
- ✓ A. S. Amber, Sanchez, D. R. Send him Fijian, Sinhalese, stamps.
- ✓ Miguel A. Abreu, Constanza, D. R. Give him name and use of Elixaceous plant.
- ✓ Send Antonio Apud, Constanza D. R. photo of store.

✓ Justiniano Tavares  
Constanza. Send him some prints  
of his lovely self.

(on Riviere Froide) Mont fleur

Hyphantornis 60 nests in top of  
 tree 45 feet from ground. nests clustered  
 in small higher limbs, which have  
 been largely denuded of leaves by  
 the building operations of the birds.  
 Building of new nests is now going  
 on as evidenced by the green of  
 half a dozen partly finished structures.  
 Many more nests than birds as  
 I see about 25 in the colony.  
 There is continual loud high pitched

Chatter among them, a monotone  
against which whistled calls  
or whizzing songs ring out clearly.  
At intervals there is louder more  
excited outcry when the brilliant  
colored males hang back down  
with widely extended slowly  
waving wings calling  
vivaciously.

Another colony Brigade hospital  
grounds in P. S. P. in top  
two Royal Palms. leaves adjacent  
badly shredded. One dead hanging  
from with half a dozen nests  
clinging  
Madagascar.

## Vitis

✓ Anthracothorax broad long tail  
turned flexibly from side to side as  
fed at duga vera  
Orchids two.

Hyphantornis halfway between  
~~Cassidy~~ Marian and Gressier  
on the Beogame road.

Colony in two Haitian oaks  
75 in one 40 in other. 30 to  
50 feet from ground - 30 to 35  
birds.

Nearby in a Spondias mombin  
and two royal palms are  
small groups of nests apparently  
not now in use. The palms  
have Dulus nests, leaves around  
the nests are stripped as usual  
Kingfisher.

- ✓ Grackle flight
- ✓ White-winged Dove.
- ✓ Ori
- ✓ Prairie Warbler
- ✓ Kingbird
- ✓ Solitary Sand piper
- ✓ Little Blue Heron

Plain Perchaie

Beyond forest of *Elaphium*  
trees 60-70 feet tall. now bare  
and leafless.

Cultivation confined to flats near  
mouths of streams where water is  
available.

Beyond Puente's arid section that  
at *Elaphium* forest had more  
rain but that because of strong  
loose soil supported a xerophytic  
growth but of distinctly different  
type. Cacti abundant.

Constanza 4/23

As one wanders ~~through~~ through the beautiful pine forests of the highlands there comes suddenly to the ear a low trilling song that to the uninitiated might be merely the stridulation of some insect. While gazing aloft to determine the source it may be repeated when the author the pine warbler may be seen working actively through the branches. When once familiar one comes to expect this sound wherever pines are encountered.

*Dendroica virens* ♀ 107.4 <sup>3:15</sup> ♂ 108.0  
*loximilis* <sup>3:30</sup> 107.5

With the exception of the harsh squalling of parrots and the screams of the guaragone the bird voices of the pine forests are subdued and may not be heard far. Their very closeness lends charm to the confused chattering warble of the Siskin. The stout bill of *Brachypteryx* on the vibrant stridulation of the pine warbler

Constanza 4/24

## GOBERNACION PROVINCIAL

LA VEGA, R. D.

Mayo 31-1927.-

No. 0987

Asunto: Recomendación.-

Señor.

Rafael Malagón.  
Gobernador Provincial Int.  
Santiago.-

Estimado amigo:-

El Señor Alexander Wetmore Assistant-Secretary, Smithsonian Institution de Washington D C, anda en el País coleccionando rarezas de nuestra fauna i flora.-

Vino a esta Provincia hace dos semanas con especiales recomendaciones del Departamento de lo Interior, Policia, Guerra i Marina, para atenderlo i rodearlo de garantías en su permanencia en mi jurisdicción.- Le tome en brazos i ha regresado contento por el éxito de su trabajo i la gente de que lo hice acompañar.-

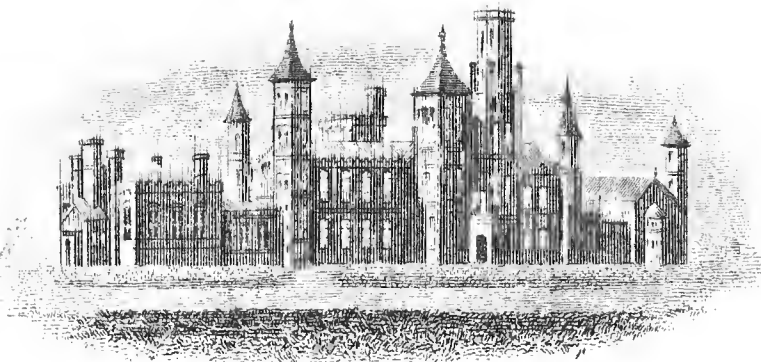

Al pasar a esa Ciudad en las mismas diligencias, lo pongo al ciudadano de sus habituales finezas, sobre todo en la parte que se relaciona con la adquisición de unas jutias que hay en la Exposición, las cuales le interesa comprar.-

Confianto en que Ud acojerá con cariño a mi recomendado, i le ayudará en lo de las jutias;  
le saluda atentamente suyo affmo amigo.-

Teófilo Cordero i Bidó.  
Gobernador Provincial.-

May 20, 1927.

Dear Doctor Wetmore:

Your very interesting letter of May 3 was received. You certainly are a versatile traveler - down in the bottom of the sea one day and up in the air on another. It is too bad that you had no fresh salt to pour on the birds' tails while you were passing over them.

We are getting together the estimates for the Budget, and I have requested the research people to suggest their most choice projects, for, as you recall, Mr. Morrow and Mr. Delano were proposing to go for us to General Lord, and it seems to me that this year, after the meeting of February 11, we are in good position to take a step forward. Dr. Mann has included in his estimate both the extension of the bird house and the house for reptiles. Probably we shall all get stepped on at the Bureau of the Budget, but there is nothing like trying.

Mrs. Walcott came back from the Southwest looking somewhat better, but is still very easily moved to tears. However, the third volume of her wild flower book is expected to issue in two or three months, and I understand that they are beginning engraving on the fourth volume.

They had an explosion of carbon bisulphide in Agriculture a little while ago, and I have asked the Secretary of Agriculture to join with us in

appointing a committee to consider whether a noninflammable substitute for carbon bisulphide may not be used for an insecticide. It appears that 4 volumes of ethyl acetate with 6 volumes of carbon tetrachloride have been used with success in another branch of Agriculture, and it may be possible that it will answer, and avoid the extreme danger which is associated with carbon bisulphide when the staff is bound to smoke.

The Association of Museums meets here next week, and in your absence they picked on me to make an address on museum practise, so you can imagine what a wonderful thrill they will get out of it.

Mrs. Abbot had an operation for tonsils about ten days ago, and even yet is remaining in bed and has a very sore throat.

The great sensation of the day is the suit for \$50,000 brought by an engineer of the Shipping Board against Dr. Pierce, pastor of the First Congregational Church, for alleged defamation of character. It occupies columns of space in the Herald and will doubtless be still able to amuse you after you return.

I hear no more rumors in regard to the secretaryship, except that one of the candidates received the second highest order of Denmark for his world-renowned work in oceanography and crinoids and is naturally much pleased about it.

With kindest regards,

Very sincerely yours,

A handwritten signature in cursive script, reading "E. G. Abbot". The signature is written in dark ink and is positioned to the right of the typed name "E. G. Abbot".

Dr. A. Wetmore,  
c/o American Consul,  
Santo Domingo City,  
Dominican Republic.

W. DEC. RAVENEL  
U. S. NATIONAL MUSEUM  
WASHINGTON, D. C.

5/3/27

Apr. 26. 1927

Dear Mr. Peterson:

After delays the  
Director of the Coast Guard advised  
us that they could not accommodate  
Mr. Collins & his party on any of  
the vessels going to Alaska  
until July. We then took the matter  
up the Interior Dept. which we  
learned had a boat going to  
Kunene Island on May 1st which  
could take them. Mr. Collins &

+ Assistant left <sup>2</sup> on Sat 23. + I trust  
will have no further trouble  
tho' no arrangements have been made  
for the return trip to Seattle. It  
seems that the Bureau of Education  
has a school on the Island of  
Kurevack. Gidley is in Savasala  
& seems hopeful of getting some  
material. Every thing is moving along  
pleasantly & I feel sure the offering tables  
will be completed by June 15<sup>th</sup> at  
latest. Contracts has been made with  
Dr Cushman for another volume at \$1200.

3

W. DEC. RAVENEL  
U. S. NATIONAL MUSEUM  
WASHINGTON, D. C.

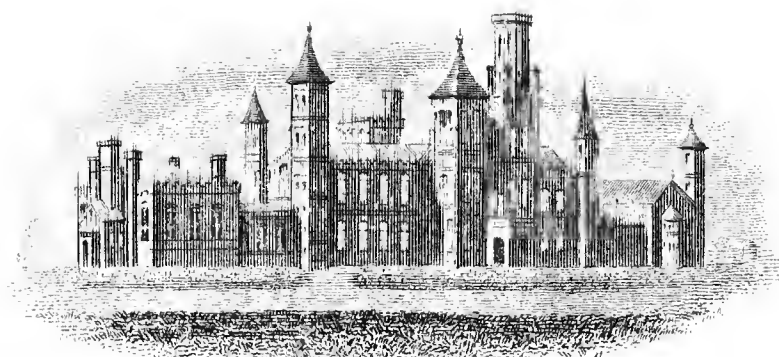

I have also made Contracts with  
Dr Byer for 2 jobs @ \$125.00 each.  
which will be completed in a  
few days. The Santa Barbara job  
has not materialized. Dr. <sup>Hoffman</sup> ~~Baker~~  
having made other arrangements.  
Dr. Richard Rupert & M. Swales are  
getting along slowly. He is better  
than he was when you sailed.  
There is no news as to who will  
be Secretary tho. A number of men

her told me that they were going  
 to suggest Dr. Abbott. I learn  
 unofficially that Mr. A. Lord  
 is an avowed candidate. Mrs.  
 Walcott is in Washington but  
 I have not seen her. Mr. Brown  
 tells me that she is looking much  
 better. We have had very large  
 crowds in the Museum Bldg's in  
 past two weeks. Am glad to report  
 Mr. Russell as slowly improving -  
 trusting that you are having good  
 weather & successful results I am  
 very truly,  
 W. de Russell

April 13, 1927.

Dear Doctor Wetmore:

I was much interested in your letter to Ravenel, and glad things are going so well. We all admired your method of repairing automobiles.

I called Mrs. Wetmore Sunday. She is getting on nicely.

Mrs. Abbot has chronic sore throat and had some fever but is now improving.

Mrs. Walcott returned yesterday. She seems much better.

The Secretary situation continues to afford amusement. Cattell has now gotten out a straw vote project. I think he has sent ballots to many if not all members of the American Association. Also the chemical organization of which Treat B. Johnson is president has nominated, through its Council, Cottrell and Alsberg.

Baseball began yesterday in beautiful weather. Wash<sup>n</sup> 6, Boston 2.

Yours sincerely,

Dr. Alexander Wetmore,  
c/o Mr. Maurice P. Dunlap, United States Consul,  
Port au Prince, Haiti.

OFFICE OF  
ADMINISTRATIVE ASSISTANT TO THE SECRETARY  
~~IN CHARGE U. S. NATIONAL MUSEUM~~

April 11, 1927.

Dear Dr. Wetmore:

Mr. Gidley left for Oklahoma on March 29th, and within a week after his arrival wired that the work had been discontinued as nothing had been found. In accordance with your instructions he was then directed to proceed to Sarasota where he will arrive tomorrow.

Everything here is going along smoothly, though the Collins expedition is still up in the air. The Coast Guard Cutter sailing from Seattle April 15th was not only laden to its fullest capacity but reported that it would not touch at Nunivak or Punuk. We have learned, however, that the Bureau of Education, Department of Interior, has a vessel sailing from Seattle May 1, and application has been made for passage on it for Collins and Stewart. They have a school on Nunivak Island, and consequently could arrange to land them at that point. Since you left we heard through the Coast Guard that Dr. Evermann had applied in February for permission to send an expedition to Nunivak Island under the auspices of one of the San Francisco associations.

We have been having real March weather ever since the first of April - rain, snow and very high northeast and northwest winds.

Hoping that everything is going well with you and with best wishes for a successful trip, believe me,

Yours sincerely,

  
Administrative Assistant  
to the Secretary.

You have probably heard that Dr. Dall passed away on March 27th.

Dr. A. Wetmore,  
Assistant Secretary.

My dear Dr. Wetmore:

In case you have time to collect any reptiles and amphibians during your stay in Santo Domingo, I know you will want a list of those kinds which would be of especial value to my report on the herpetology of Santo Domingo.

The specimens which we most need are:

Burrowing snakes (Typhlops). These are often found by people digging in their gardens, or by farmers ploughing.

The grass-lizards (Anolis). As many of these as can be caught, in every locality visited, might yield some new species, as Mr. Miller brought back two new species, from San Michel and Mon Repos in Haiti, and said that they were very numerous in the high grass.

Burrowing lizards (Amphisbaena). The burrowing forms are always rare in collections.

Skinks (Celestus). We need a large series from as many localities as possible in order to settle the amount of the variation. They are rather secretive in habit and hard to find.

Any and all of the smaller frogs (Hyla & Eleutherodactylus). There are probably a few new species yet to describe. The big tree-frog *Hyla dominicensis* would be welcome alive as a pet for the Zoo.

With my thanks inadvance for whatever you may get, I am

Very gratefully yours,

Doris M. Cochran.

*Hyla vasta* 4 inches long has a rough skin and is poisonous. is rare  
*Hyla dominicensis* is abundant. not wanted as pet.  
juvenile. 3 inches long, smooth

Dear Sir:

The receipt is acknowledged of your letter of the 16th instant enclosing letter of identification and check for \$65.00 covering the cost of your transportation to Port-au-Prince, Haiti, on the S.S. "ANCON" sailing March 22nd, at 3 P.M. from Pier 65, foot of West 25th Street, this City. Kindly fill out the attached blank and return to this office promptly so that the passage ticket may be prepared and handed to you when you call at the pier after 1 P.M. on sailing day.

Yours truly,

  
Passenger Agent.

March 16, 1927.

Panama Railroad Steamship Line,  
24 State Street,  
New York, N.Y.

Gentlemen:-

In accordance with your telegram of March 11, stating that you will have accommodation for my use on the S/S Ancon sailing March 22 from New York for Port au Prince, Haiti, I enclose herewith a letter from the Acting Secretary of the Smithsonian Institution certifying that I am traveling officially for the Institution, and my check for \$65.00 to cover passage. The amount of passage is in accordance with a letter received from you January 27, 1927, covering this same matter. In case the amount is not correct please inform me at once and I shall make adjustment at your office in New York. I am remitting by personal check rather than by Government transportation request, as the funds to cover my coming trip have been advanced to me and this seems the simplest way to handle the matter.

I shall appreciate immediate reply in this matter as I expect to leave Washington for New York Sunday. It will be necessary, therefore, for mail to reach me Saturday. A special delivery stamp is enclosed herewith for use in returning this ticket. With thanks for your attention, I am

Very truly yours,

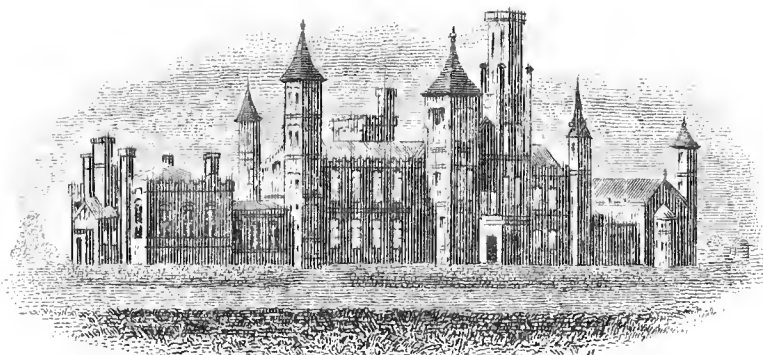

Assistant Secretary.

WASHINGTON, D. C.

March 10, 1927.

Dr. A. Wetmore,  
Assistant Secretary,  
Smithsonian Institution.

My dear Doctor Wetmore:

As you are leaving for Hispaniola very shortly I thought perhaps you might like to see my account of Neoabbottia, a new genus which I described from this island several years ago. I do not care for any additional material of this plant from the southwestern part of the island, but the same plant, or a closely related species, is found farther north, and if you could get some photographs and branches and, if possible, flowers I should be very glad to have them.

When I was in Philadelphia during the Holidays I saw in the herbarium at the Academy a poor specimen collected by Poiteau on these islands about 1789, which has not since been collected. It was described in 1803 as a new species of Inga and afterwards transferred to the genus Pithecolobium, but the specimen shows that it does not belong to either genus, and possibly may be an undescribed one. If you wish, I will send you a photograph of the specimen in Philadelphia and also of the published illustration. It is possible that you or Doctor Abbott may be able to locate the plant. It certainly would be a most interesting and important thing to do.

Yours very truly,

  
J. N. Rose  
Associate Curator,  
Division of Plants.

NEOABBOTTIA, A NEW CACTUS GENUS FROM  
HISPANIOLA

By N. L. BRITTON AND J. N. ROSE  
(WITH FOUR PLATES)

Among the earliest cacti described were those obtained by Plumier, more than two hundred years ago, mostly from the island of Hispaniola, better known as Santo Domingo. These were characterized briefly by him in 1704 and his illustrations of them were published in 1755 by Burmann; Lamarck gave most of them binary names in 1783 under the genus *Cactus*, and in 1828 De Candolle referred all the cereoid forms to the genus *Cereus*; the other species described by Plumier have been referred by various authors to *Mammillaria*, *Cephalocereus*, *Pilocereus*, *Rhipsalis*, *Melocactus*, *Pereskia*, *Opuntia* and *Nopalea*. We have experienced great difficulty in definitely identifying the plants from the illustrations of Plumier, since these are largely diagrammatic. As the type locality is generally given, however, the identification of all of them may eventually be made fairly definite.

In 1920 when Dr. W. L. Abbott and Mr. E. C. Leonard were starting for Haiti, we asked them to collect both living and herbarium specimens of all the cacti met with. As good fortune directed, they spent a considerable time on the Cul-de-sac, where Plumier collected, and so probably obtained several of the species which he described. About 20 species of cacti were observed by them there. One of these, which has proved to be an undescribed genus, is the subject of this article. The Cul-de-sac is the bottom of an old salt lagoon, which now has an altitude of 20 feet or more above the sea. It is a coral formation and an ideal habitat for many kinds of cacti. Here they appear in thickets or literally as forests, forming the dominant feature of the landscape. This region lies north and east of Port-au-Prince, extending from the bay of Port-au-Prince to Lake Saumatre.

After the return of Dr. Abbott and Mr. Leonard in September of the same year with these valuable specimens we wrote, at the suggestion of Mr. Leonard, to Mr. H. M. Pilkington, an American business man then stationed at Port-au-Prince, asking him to pro-

cure additional material. In the latter part of December, 1920, Mr. Pilkington returned to New York and brought with him two large boxes of plants, containing two sections of the trunk, several living plants, and fruits of the new genus, as well as specimens of four other species, with field notes and photographs.

**NEOABBOTTIA** Britt. and Rose, gen. nov.

A treelike cactus with a smooth upright terete trunk and a much branched top, the branches strongly winged or ribbed, normally from the distal end of the preceding branch, but sometimes from below the tip and usually in the same plane; ribs thin and high, very spiny;

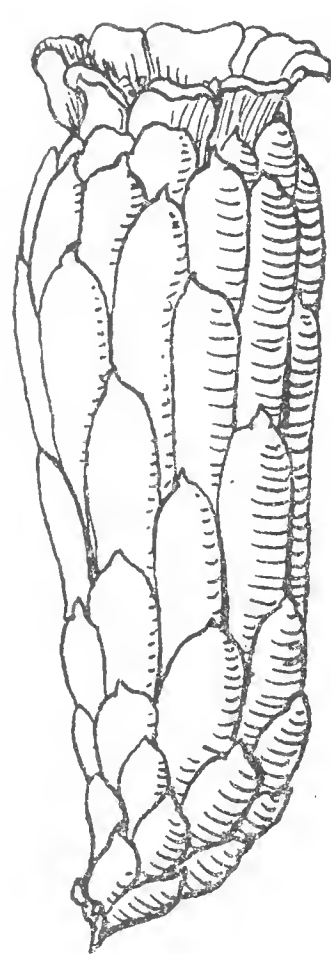

FIG. 1.

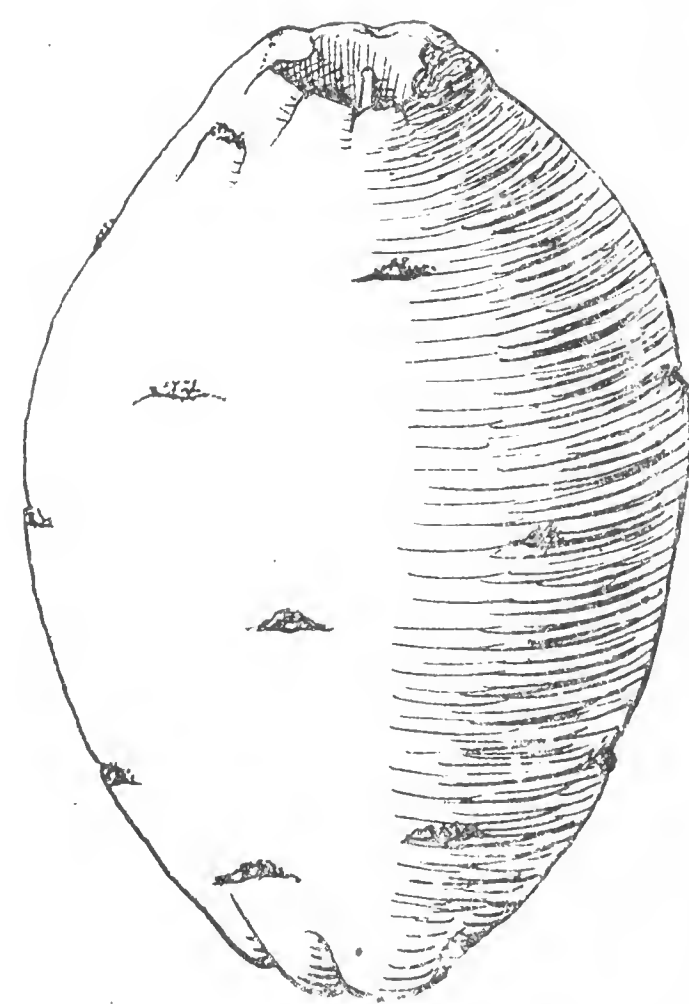

FIG. 2.

FIGS. 1 and 2.—Flower and fruit of *Neoabbottia*. Natural size.

flowers nocturnal, small, tubular with a narrow limb, borne several together at the distal end of a terminal branch from a small felted cephalium; perianth persisting on the ovary; perianth-tube and ovary bearing small scales with short wool and an occasional bristle in their axils; perianth-segments very small; throat of flower a little broadened at the top, bearing many stamens; style slender; fruit oblong, turgid, nearly naked, deeply umbilicate; seeds minute, black, muricate.

A monotypic genus of Hispaniola, dedicated to Dr. W. L. Abbott, a patron of natural history.

Type species, *Cactus paniculatus* Lam.

**NEOABBOTTIA PANICULATA** (Lam.) Britt. and Rose

*Cactus paniculatus* Lam. Encyl. 1: 540. 1783.  
*Cereus paniculatus* DC. Prodr. 3: 466. 1828.

Six to ten meters high or even higher; trunk woody, 30 cm. in diameter, the wood close-grained, yellowish white; bark of the trunk 1.5 cm. thick, brown, not spiny in age, smooth; branches 4 to 6 cm. broad, strongly 4-ribbed, rarely 5-ribbed, occasionally 6-ribbed or winged; ribs thin, 1.5 to 2.5 cm. high, their margins somewhat crenate, the areoles borne at the base of the sinuses, 1.5 to 2 cm. apart; spines 12 to 20, acicular, brownish to gray, 2 cm. long or less; cephalium 1 to 1.5 cm. in diameter, becoming elongated and angled; flowers straight, 5 cm. long, with a limb about 3 cm. broad; tube 6 to 7 mm. long, about 18 mm. in diameter, with walls 5 to 6 mm. thick; inner perianth segments greenish white, short-oblong, about 1 cm. long, obtuse; throat 18 mm. long, covered with numerous filaments, these with a knee near the base and pressing against the style; stamens and style included; ovary and flower tube tubercled, the former with short tubercles, the latter with oblong ones (sometimes 1.5 cm. long), each ending in a depressed areole subtended by a minute scale; areoles bearing a tuft of brown felt and an occasional brown bristle; fruit oblong in outline, 6 to 7 cm. long, 4 to 5.5 cm. in diameter, turgid, nearly naked; rind green, thick, hard; seeds rounded above, cuneate at base, with a large lateral depressed hilum.

Collected near Port-au-Prince, Haiti, on the Cul-de-sac by Dr. W. L. Abbott and Mr. E. C. Leonard, April, 1920 (no. 3500); also at the same locality by Mr. H. M. Pilkington, December, 1920; also a single branch by Dr. Paul Bartsch at Thomazeau in 1917 (no. 221). Here doubtless belongs W. Buch's specimen, described in a note under *Cereus paniculatus* by Dr. I. Urban in his *Flora Dominicensis*.<sup>1</sup>

This plant was described by Plumier<sup>2</sup> as follows: *Melocactus arborescens*, tetragonus, flore ex albido. This description was repeated by Tournefort,<sup>3</sup> with the addition of a single word, in 1719. Plumier's drawing of this plant was published long after his death by Burmann as plate 192 of the *Plantarum Americanum* and upon this plate Lamarck based his *Cactus paniculatus*, which De Candolle

<sup>1</sup> *Symbolæ Antillanæ seu Fundamenta Floræ Indiæ Occidentalis*, 8: 462. 1920.

<sup>2</sup> *Catalogus Plantarum Americanum*, 19. 1703.

<sup>3</sup> *Histoire des Plantes*, 1: 653. 1719.

a little later took up as *Cereus paniculatus*. Ever since, the plant has usually passed under the latter name, with an occasional reversal to the earlier one.

Until recently, the species has been known only from this old illustration and these brief descriptions. The Abbott and Leonard material consists of wood sections and herbarium specimens of branches, flowers, fruit, and seeds, supplemented by living specimens and by fruit and flowers in formalin, together with several habit photographs. These convince us that the plant belongs to neither *Cactus* nor *Cereus*, but to an undescribed genus. In habit it resembles *Dendrocereus*, its branches resemble *Acanthocereus*, and the small limb of the flower resembles *Leptocereus*; but the plant differs from all of these in bearing several flowers at the ends of terminal branches and in developing a kind of cephalium. In the last respect it approaches *Neoraimondia*, near which we would place it in our present classification.

Although at first *Neoabbottia* is weak and only 4-angled, suggesting *Acanthocereus*, it forms ultimately a thick woody trunk. The full-grown plant in habit and branches much resembles *Dendrocereus nudiflorus* of eastern Cuba, but it has much smaller and different flowers and seeds.

The following remarks are from the careful field notes of Mr. Pilkington, made in December, 1920.

"Grows to a height of 50 feet, in light sandy arid soil of recent ocean bottom. Known to natives as 'Gadasse.' No use is made of the plant except burning the dead branches for torches. The wood so used is called 'Bois Chandelle' or 'Bois Flamboyant'—'Candle-Wood' and 'Flaming-Wood,' from the bright smokeless light. Fruit falls when ripe; rind soon decays, leaving seed in a mass retained in shape by a mucilaginous pulp. The young plant develops a bulbous root with a simple upright stem made up of several joints and later giving off lateral branches which come off from the upper end of other branches; the main stem is 4 to 6-winged, but as it grows older becomes square, pentagonal, or hexagonal, according to the original number of ribs on each joint, and in age terete or nearly so with the ribs showing as mere lines, bearing the scars of the old spines; the branches are more numerous on one side of the main branch and these always lie in the same plane, the ribs when of the same number being opposite those of the main joint. This disposition of the joints causes the main stem to bend or curve and the whole has a striking resemblance to the flat antlers of moose and

elk. This arrangement is shown in the mature tree, although the intermingling of the several branches gives the general effect of an ordinary tree-top.

"The natural pruning of the tree comes about through the death of branches caused by epiphytic plants, the breaking off of branches by the weight of a clambering cactus, and the attack of insects which live in the fleshy joints. These insects are much sought after by a red-headed woodpecker.

"Flowers are borne at the extreme tip of the terminal joints and never from the sides, the fruit appearing therefore always at the tips. A single fruit always grows directly in line with a rib, but when several fruits grow from the same terminal bud they are compelled to radiate at right angles to the axis of the joint. Four fruits from one joint is the highest number observed, two only usually appearing to be normal. As the ovary develops the flower shrinks, dries, and appears finally as a brown protuberance attached to the apex of the mature fruit. The old flowers at length fall off the mature fruit, leaving a well-defined umbilicus. The fruit measures  $6\frac{3}{4}$  to 7 inches in circumference. When ripe it is waxy, smooth, yellow with faint streaks of pink radiating from the base; flesh same color as rind, glutinous, firm, slightly acid to taste, hardly edible.

"Seeds are embedded in a secretion which in water produces a remarkable bulk of mucilaginous jelly, which is mildly acid and not unpleasant to taste. Fruit does not seem to be attacked by birds and is never eaten by natives. Successive crops of fruit appear from this same bud cluster at the top of the terminal joint, each crop absorbing some of the substance of the joint; the joint shrinks and solidifies, the ribs become furrows, the center enlarges, and finally all becomes a woody mass of varying dimensions, as long as 3 inches, thus forming what you have called a 'cushion,' but which is really an atrophied joint after several years of fruit-bearing."

The nature of the cephalium is not well understood, but it seems to be an abortive joint. It first appears like a large felted areole from which several flowers are produced; it slowly elongates and finally becomes 7 cm. long or more, still producing the flowers at the tip. When very old most of the felt wears off, leaving a stubby 4 or 5-angled joint; the areoles, however, are not borne on the angles as in normal branches, but in the depressions or furrows between the ridges. In these furrows the areoles form a continuous band of felt from the base to the top of the joint. One of these flower-bearing joints which Mr. Pilkington has sent is 5 cm. long and we have esti-

mated that it has borne 20 sets of flowers and fruits and may possibly be 20 years old. While all the flowers we have seen are terminal, it is possible that they may sometimes occur from other places on the terminal joint. In one specimen examined we have found an enlarged areole near the base and one on the side of the terminal joint, which suggests that they had been flower-bearing. Plumier's illustration, which is not accurate, shows numerous lateral flowers. The stubby flowering joints, while usually solitary, appear sometimes in pairs.

#### EXPLANATION OF PLATES

##### PLATE I

Plumier's original illustration of *Neoabbottia paniculata*, reduced; reproduced from plate 92 of Burmann's *Plantarum Americanum*.

##### PLATE 2

*Neoabbottia paniculata* (Lam.) Britt. & Rose. A, B. Two types of growth.

##### PLATE 3

*Neoabbottia paniculata* (Lam.) Britt. & Rose. A, a plant growing in the open; B, a plant growing in a thicket.

##### PLATE 4

A. *Neoabbottia paniculata* (Lam.) Britt. & Rose. Upper part of a plant.  
B. *Neoabbottia* and *Cephalocereus*. a, An elongated branch of *Neoabbottia*; e, a terminal branch of *Neoabbottia*, fruiting for the first time; c and f, stubby branches of the same, which have produced fruit for many years; b and d, small plants of *Cephalocereus polygonus*, growing epiphytically on *Neoabbottia*.

WASHINGTON, D. C.

March 9, 1927

Mr. A. Wetmore,  
United States National Museum,  
City.

Dear Mr. Wetmore:

We received your letter of March 8th, enclosing \$63.00 which we have placed to the credit of your account.

In regard to the size of the suit case, say that our original order shows the size was to be 26 x 14 x 7 and I think this is the size made. The figures are from my memorandum made at the time you were here. If there has been any misunderstanding about this I am very sorry. Also if we have made you a definite price of \$12.00 we will, of course rebate you. I do not recall that we did make you a definite price, however your recollection, is no doubt, better than ours as you have but one case and price to remember, whereas we have them every day. The case made was worth at least \$15.00, and if we have quoted you a definite price of \$12.00 we will be very glad to make a refund. I am inclined to think, however, you are mistaken as to the size.

Respectfully,

TOPHAMS INC.,

*J. H. Dwyer*

Gentlemen:-

In accordance with your statement of March 1, 1927,  
I remit herewith my check for \$63.00 in payment in full.

In paying this account I note that the fibre suit-  
case is an inch and a half wider than I specified, and so is not  
suited for the use I had in mind. Further, that you are charging  
me \$15.00 for it instead of \$12.00 that you quoted to me.

Very truly yours,

*J. WETMORE*

Assistant Secretary.

C O P Y

Dr. W. L. Abbott,  
Northeast, Maryland.

March 7, 1927.

Dr. Alexander Wetmore,  
Smithsonian Institution,  
Washington, D.C.

Dear Doctor Wetmore:-

I am glad to hear that you are at last starting for Haiti. I wrote to John King a few days ago and told him to be sure and meet you at any place you might wish on the Dominican side. I have never had any answer to my first letter to him - possibly that letter miscarried as it contained \$5. I also told John to meet you himself, and not to send his brothers who are perfectly worthless.

In the Dominican Republic be sure and visit Constanza and go up the high wide valley opening to the eastward, down which the Rio Grande flows. It is surrounded by high mountains, (saw traces of glaciation on hills to right (South)) and is the place I recommended to the Dominican Government as a cinchona plantation. Then try to go to Mt. Rucilla to the west of Constanza where Beck got the crossbill. The road to both places starts from Varabacoa, 15 miles south of La Vega, on the Dominican (Scotch) railway line for Santiago to Sanchez.

Constanza must have been an Indian center, and lots of small Indian relics, stones, pottery can be got from the inhabitants - cheap? if you are not in a hurry. If you spend all your time in the mountains of the Cent. Cordillera you will not regret it.

Mule transport can generally be got cheap in the mountains, but not so much so in the Vega. (Vega reale of Columbus). Dominicans are much superior to Haitians in every way. From Port au Prince you can visit Furcy, 4000 feet, and go on to La Tourane, high up on slopes of Mt. de Selle - I never went to the latter - There is an immense precipice on north face of La Selle.

There is a "rest house" at Police Station at Furcy, but we stayed at Madam Fontineau's - who rents a little house to strangers and cooks for them. There is plenty of grub everywhere. Women carry head loads of food down to market down all the mountain roads on market days, just carry rice and beans, coffee, sugar etc. for two or three days. Constanza may have food or maybe famine. As a rule food everywhere in both republics - But carry rice with you. Carry tarps to cover loads - Leonard has some. Don't carry anything that you can't sling on side of a mule.

There may be a wagon road finished to Varabacoa from La Vega by this time - Last time I stayed in Varabacoa at a sort of fonda, I was nearly drowned by bugs and flees. Hire a house at Constanza of the shop keeper - forgot his name - Turkheim, the botanist, stayed several months at Constanza - and I got the type of the large owl there. I often heard them in the pine woods. It is very cold in mountains and take thick clothes and blankets. Ther. falls below 50° - even frost at times.

You will fall in love with the high interior of Santo Domingo - People largely of Indian descent. There is nothing like it in the West Indies, - climate is bracing and lovely. It is 15 or 25 times the area of the Jamaica highlands. I think indigenous rodents still exist there, but the mongoose has already arrived.

Take warm clothing and don't get dysentery. Take an old thick flannel shirt for John - He didn't take it on our first trip and nearly froze to death although I gave him one - he left it behind. Take fly tents or something to camp under high up the mts. Hope you have a good trip - Hispaniola is lovely, nothing like it in U.S.A.

Yours very truly,

W. L. Abbott.

P.S. I am enclosing cheque for \$1,000 payable to Smithsonian. \$500 toward expenses of your trip and \$500 toward Leonard's next botanical trip to Haiti whenever he may get off.

W.L.A.

March 7, 1927

My dear Cavalier -

This is to introduce  
Mr Alexander Wetmore  
the Asst Secretary of the  
Smithsonian Institution -

Mr Wetmore is visiting  
Haiti to make some  
scientific research on  
the bird and animal life  
of Haiti; extinct species  
and matters of scientific  
interest -

I know you can be  
of the greatest assistance to

him from your intimate  
knowledge of the people  
and life of Haiti and  
I am writing to ask  
you to give him all  
the assistance you are  
able -

I have been hoping  
to hear from you - but  
no letter has come for  
a long time - I know  
you have much to tell  
me of developments and  
news so when you find  
time please drop me a  
line -

Best wishes to yourself  
and Madame Chevalier

Very Sincerely yours  
W.C. McDougall

Personal letter. Postage paid.

Mr. A. Wetmore,  
% Smithsonian Institute,  
U. S. National Museum,  
Washington, D.C.

Dear Sir:

Referring to your letter of the 17th would advise that we happen to have in our odd stock 6 pieces clinical type thermometers that will show a special range of 94° to 120°F. We will rush these through the finishing process and make shipment so that the thermometers will be in your hands by March 5th.

We are entering this order as per your request at a price of \$1.50 each net. We desire to mention that it so happens we have these, as stated above, in our odd stock and can finish them up in this short period of time and at this figure. It would, however, be impossible for us to duplicate this order in the future in either time or charge.

We trust that our action will prove satisfactory to you and assure you that we will be more than glad to give your requirements our best possible service at all times.

Yours very truly,

TAYLOR INSTRUMENT COMPANIES,  
E. N. Hurlburt,

Laboratory Instrument Dept.

GN

February 17, 1927.

Taylor Instrument Company,  
Rochester, New York.

Gentlemen:-

May I ask if it is practicable for you to make for me six clinical thermometers registering from 95° to 115° Fahrenheit for use in taking bird temperatures? I wish to have these delivered not later than March 5.

You may possibly recall that I have bought a considerable number of instruments of the type described from you in previous years, and that others who have been interested in the matter, at my suggestion, made similar purchase from your firm. I expect to get away for a short trip to Haiti and Santo Domingo early in March and desire the thermometers for use in studies of the body temperatures of birds in that tropical region. Your prompt attention in this matter will be greatly appreciated.

If you can handle the commission please ship and bill to me direct that there may be no delay in the matter. I am

Very truly yours,

A. H. E. M. I. R. L.

Assistant Secretary.

Dear Sir:

Your letter of the 22nd instant came duly to hand, and in reply we wish to advise that we can offer you accommodations on the S.S. "ANCON" sailing February 23rd or the S.S. "ANCON" sailing March 22nd. The S.S. "CRISTOBAL" sailing on March 8th is now booked to capacity with a Congressional Party.

Kindly give me early advice as to your proposed sailing date so that desirable accommodations may be reserved for your use. The special rate of \$60.00 plus \$3.00 revenue tax plus \$2 Haitian tax will be granted for your use. When replying kindly forward a letter of identification and request for the special rate from the Chief of the Department in which you are employed.

Yours truly,

  
Passenger Agent.

UNDER THE DIRECTION OF THE

SMITHSONIAN INSTITUTION

WASHINGTON, D. C.

A. WETMORE  
JAN 25 1927

January 24, 1927.

Dear Dr. Wetmore:

In reply to yours of the 19th, in regard to fish of Haiti, the name of the one I described to you has slipped from my memory. It looks very much like one of the genus *Gobioscx*, a short, thick, subtriangular fish with the pectorals modified into clinging organs. These were very common in the streams.

Formerly, when the Hamburg line was running regularly into the Haiti, numbers of fishes were imported into Germany. But looking through the list of those that have been in American aquariums for the past several years, only one genus, *Linia*, is listed as coming from the Island.

There is a large and growing interest in the collecting and breeding of tropical fresh water fishes. There are a few that you might call standard species that most people have, and a few unusual species. I am sure that one small Negro boy employed for a week or less, would secure a lot of things that would be of great interest. Pools and still water should be better hunting grounds than the streams.

Fishes could be shipped in kerosene tins about three-eighths full of water and would need no care at all on the voyage up. A little water weed might be good, as well as interesting. I am willing to give, personally, \$25 to cover the cost of collecting and shipping these, more if necessary. I assure you that any specimens that you might get would be appreciated not only by me, but by other aquarium keepers.

Very truly yours,

*W. M. Mann*

Dr. A. Wetmore,

New York, N.Y.

Gentlemen:-

May I ask that you notify me as to sailings of your vessels for Port-au-Prince, Haiti about March 1, together with your schedule of rates for first cabin passage? It is my plan to visit Haiti and Santo Domingo on official business for the Smithsonian Institution and the U. S. National Museum. I desire to make reservation on a boat sailing as soon after March 1 as possible.

Very truly yours,

A. WETMORE

Assistant Secretary.

Smithsonian Institution  
United States Natl. Museum  
Washington, D. C.

Gentlemen: Attention of Ass't. Secretary

We are in receipt of your letter of Jan. 4th with reference to tarpaulin waterproof sheet for use in the tropics to be made from Panmack material.

As previously stated, while we do not carry this particular brand of material in stock, we are going to try and procure enough for you to make up the sheet you desire. We shall be glad to write you in another mail very shortly, giving quotation provided we are able to get the material in question.

Assuring you of our desire to be of further service to you, we remain

Very truly yours,

ABERCROMBIE & FITCH CO.

Mgr. Mail Service Dept.

B. Smith/IF

January 4, 1927.

Mr. B. Smith,  
Manager, Mail Service Department,  
Abercrombie & Fitch Company,  
Madison Avenue & Forty-Fifth Street,  
New York, N.Y.

My dear Sir:-

In response to your letter of December 30, I beg to say that the waterproof sheet, concerning which I wrote you under date of December 27, is intended for use in the tropics, at times under conditions where packing will be done of necessity by men. Under these circumstances I desire, if practicable, to procure such a sheet made from Panmack. I do not wish a substitute. May I ask if you can handle this proposition, and if so, can you quote me a price?

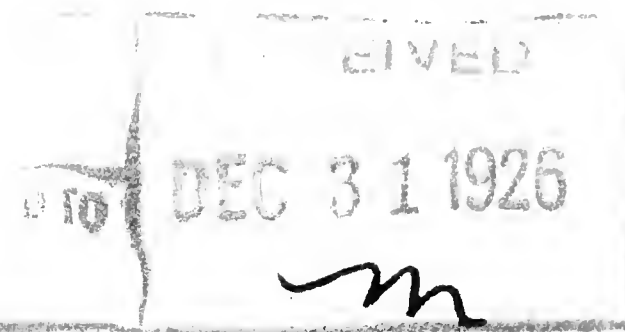

Your kindness in this matter will be greatly appreciated.

Very truly yours,

Assistant Secretary.

United States National Museum  
Washington, D. C.

Gentlemen: Attention of Ass't. Secretary

Replying to your letter of December 27th, we do not carry in stock any Panmack material as per your sample. However, herewith enclosed you will find a small sample of our O.D. Jeans waterproof fabric, which is the best substitute we have to offer.

This material is now being extensively used by us in the manufacture of waterproof tarpaulins, bags, etc. We will be glad to make up for you a sheet from this material, size 7 x 9, the sheet to have four eyelets for the attachment of heavy cords on each margin. The price is \$10.20 less 10%, F.O.B. New York; shipment three days after receipt of order.

Thank you for your inquiry.

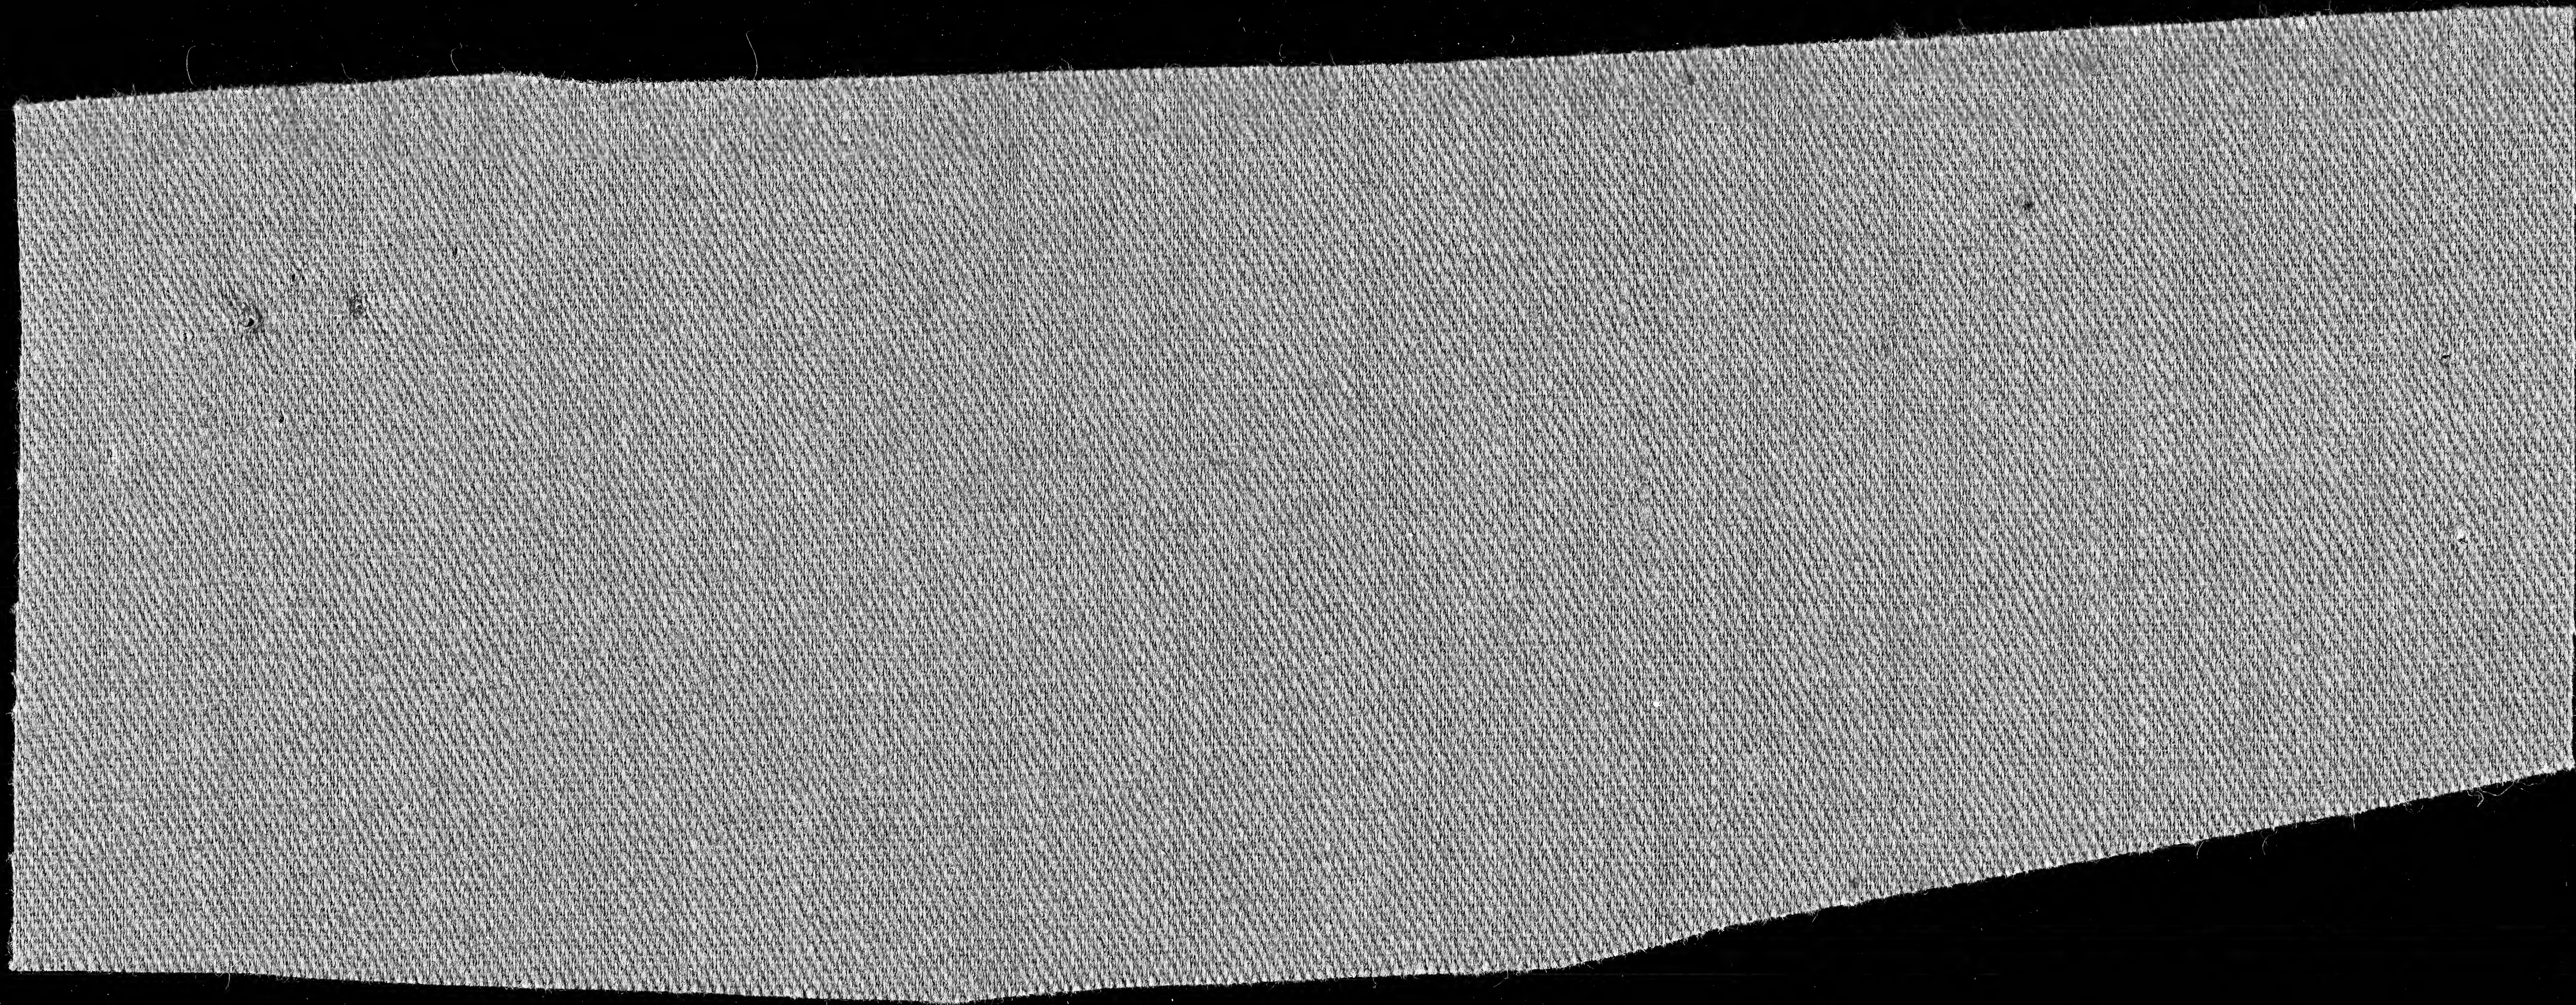

Very truly yours,

ABERCROMBIE & FITCH CO.

PANMACK

TS - TS

Width 36"

Enclosure

December 27, 1926.

Abercrombie & Fitch,  
Madison Avenue and 54th Street,  
New York, N.Y.

Gentlemen:-

May I ask that you quote me a price on a sheet 7 x 9 feet made of Panmack grade TS-TS, in accordance with the sample herewith enclosed? This sheet is to have four eyelets for the attachment of heavy cords on each margin. The sheet is intended for use either as a bed cover or as a temporary roof shelter for short periods during work in the tropics. Your attention in this matter will be greatly appreciated.

Very truly yours,

A. BRECKENRIDGE

Assistant Secretary.

# GENERAL AND COMMERCIAL INFORMATION CONCERNING THE SANTO DOMINGO CONSULAR DISTRICT.

(PREPARED BY CHARLES BRIDGHAM HOSMER, AMERICAN CONSUL AT SANTO DOMINGO, JULY 1925.)

**POPULATION, RACE, PREDILECTIONS, AND STANDARDS OF LIVING:** The Consular District of Santo Domingo includes the five southern provinces of the Dominican Republic. The population numbers about 450,000 the majority of which is colored, about 75 % of the total being of mixed African, Indian and Spanish descent. The majority of adults are illiterate, but in decreasing proportion. Although the upper classes, comprising possibly 15% of the total population, maintain a fairly high standard of living, the wants of the laboring classes are few and supplied largely by native products. The principle centers of population of the district are Santo Domingo, capital, and largest city of the Republic, population, 33,000; San Pedro de Macorís, principal port for the exportation of sugar, population 20,000; Azua, population 6,000; Barahona, 5,000 and La Romana, 5,000.

**AREA, CLIMATE AND TOPOGRAPHY:** The area of the district is about 10,000 square miles. Climate along the seacoast, where the chief towns are located, tropical but salubrious; temperature seldom exceeds 90° Fahrenheit even in summer, and nights are always pleasant. Annual rainfall varies between 45 and 60 inches. Although sections of the country are mountainous and considerable areas toward the south are arid, the coastal plain has an average depth of about 25 miles and comprises the most populous and developed region.

**LANGUAGE, POSTAGE AND GENERAL CUSTOMS POLICY:** Spanish is the language of the country, and is preferred by merchants for business purposes, though many understand English. Postage on first class mail, to and from the United States is \$0.02 per half ounce. The parcel post convention provides for packages up to 22 pounds and postage at \$0.12 per pound. Import duties are specific in most cases. They are primarily for revenue and collections amount to 15% and 20% of the total value of imports. There are no export duties collected.

**LEADING IMPORTS AND LEADING EXPORTS:** Imports are made up largely of cotton textiles, iron and steel products, rice, flour, lard, dried and smoked fish, liquors, oils, gasoline, automobiles, coal, lumber, cement and drugs. In 1924, total exports from this district were valued at \$24,316,912 and of this amount, sugar shipments represented \$21,453,660. Total imports for the same period, were valued at \$17,145,016. This represents 80% of the Republic's total foreign trade for 1924, of which United States supplied 74% of imports and bought 33% of Dominican exports. The largest industry is the cultivation and manufacture of cane sugar. Secondary industries are the cultivation of coffee, cacao, and corn, lumbering, apiculture and cattle raising. These products also comprise the principal items of exports.

**TRANSPORTATION CONNECTIONS AND CONDITIONS, PACKING:** The Clyde Steamship Company maintains fortnightly freight and passenger service between New York and Dominican ports. The Bull Insular Line and the Columbus Steamship Company, also maintain regular freight sailings from New York. Cargoes to or from American Gulf ports can be handled by the Lone Star Steamship Company, of Galveston. There are weekly freight and passenger steamer connections with Porto Rico and monthly sailings to Cuba; also irregular connections with European ports. **RAILWAYS:** There are no railroads open to the public in any part of this district. **HIGHWAYS:** Permanent macadam roads now connect the Capital with Monte Cristi on the north coast, passing through important interior towns; with San Pedro de Macorís and Higüey toward the east; with San Juan toward the west, and others are under construction. Inland communications have much improved during the last four years and the transportation of merchandise to interior points by motor trucks is steadily increasing. A fair wholesale and jobbing business, particularly in textiles and provisions, is gradually developing between the large ports and the interior; whereas, until recently nearly all importations were by retail merchants. There are no special packing requirements for merchandise exported to this district, except the precautions always needed when discharge may be to lighters, which is necessary in some ports.

**LEADING INDUSTRIES AND OCCUPATIONS:** Minerals are not mined in commercial quantities, though known to exist. There are no shipyards, foundries or large industrial plants established here and the only articles manufactured locally are shoes, straw hats, furniture, brick, tile, cigars, cigarettes, rum, soap and candies; cigars and cigarettes are the only manufactured products capable of meeting local requirements. This is primarily an agricultural region and the major products of the district are referred to under the heading of exports.

**TERMS OF CREDIT, EXTENSION OF AMERICAN TRADE:** Thirty to ninety day credits are usually exacted by merchants whose financial standing is good. American currency is legal tender throughout the Republic. The exchange rate on New York is  $\frac{3}{4}$  % and is not subject to fluctuation. Business conditions are more stable than a year ago but AMERICAN EXPORTERS SHOULD STILL USE GREAT CAUTION IN EXTENDING CREDITS. Consular officers assume no responsibility for firms included in lists supplied to inquirers; neither can they undertake the collecting of overdue accounts nor furnish information relative to the credit standing of local merchants. The following banks in Santo Domingo, are prepared to furnish credit reports: International Banking Corporation (American), Banco Territorial y Agrícola de Puerto Rico (American), The Royal Bank of Canada (British), and the Bank of Nova Scotia (British).
